

Doc2Audio — Mobile App

Install it on your phone like a normal app. All the features. Works offline.

A Put the app online once (~2 min)

Your phone needs a web link (https) to install from. Pick one:

Easiest — Netlify Drop

1. On a computer, unzip the app folder.
2. Open app.netlify.com/drop.
3. **Drag the whole folder** onto the page.
4. You get a link like **your-app.netlify.app**.

Or — GitHub Pages

1. Put the app files in a repo **docs/** folder.
2. **Settings** → **Pages** → deploy from your branch + **/docs**.
3. Live at **your-name.github.io/repo/**.

B Install it on your phone

iPhone / iPad (Safari)

- 1 Open the link in **Safari**.
- 2 Tap **Share** (square with up-arrow).
- 3 Tap **Add to Home Screen** → **Add**.

Android (Chrome)

- 1 Open the link in **Chrome**.
- 2 Tap **⋮** → **Install app**.
- 3 Tap **Install**, open from your app drawer.

C Use it

- **File / Paste / Image** tabs to load a document, pasted text, or a screenshot.
- Pick a **voice**, set **speed/pitch**, tap **Play**; tap a sentence to start there. **Download MP3** with the *Downloadable* voice.
- **Read from other apps**: select text → **Share** → **Doc2Audio** (Android now; newer iOS).

Good to know. First launch needs internet; after that it works **offline**. On iPhone, tap **Play** to start speech; saving an MP3 uses the share/save sheet. The system voice sounds best but only plays; the **Downloadable** voice is the one that saves. Nothing is uploaded.

🌟 Read images in ANY language (AI)

The Image tab can use Google Gemini to read screenshots accurately in almost any language.

Two methods in the Image tab

🌟 **AI (any language)** — best accuracy, reads any language. Needs internet + a free key.

Offline OCR — works with no internet, lower accuracy; pick the language from the menu.

What it costs

Google Gemini has a **free tier** — no credit card. Fine for personal use (a few reads per minute). The key is stored **only on your device**.

1 Get a free Gemini key (2 minutes)

- 1 Go to aistudio.google.com/apikey and sign in with a Google account.
- 2 Tap **Create API key** → **copy** it.
- 3 In Doc2Audio → **Image** tab → paste it into the **Gemini API key** box.

2 Use it

Choose 🌟 **AI (any language)**, then drop a screenshot or photo. It returns the text in its original language, which then reads aloud like anything else.

Privacy. With AI extract, the image is sent to Google to be read (needs internet). Don't use it on confidential images.

Offline OCR keeps everything on your device.

Model: gemini-2.5-flash (free tier) · endpoint: generativelanguage.googleapis.com · you can change the model in the file if Google updates names.
