

Doc2Audio (Windows) — Quick Start

Turn a document into an MP3, with the reference codes stripped out.

1

Keep the files together

In one folder: `doc2audio.py` `Setup.bat` `Convert to Audio.bat`

2

Run Setup once

Double-click `Setup.bat`. If Windows SmartScreen warns, choose **More info** → **Run anyway**. It installs Python, ffmpeg and the **Amy** voice (a few minutes).

3

Convert

Drag a document onto `Convert to Audio.bat` (or double-click it and paste a file path). Works with .docx, .pdf, .txt, .md, .html.

↓

Get your audio

Saved next to your document as **"YourDocument (audio).mp3"**. Double-click to play.

Requirements: Windows 10 (21H2)+ or Windows 11. If the Amy voice can't install, the tool automatically uses the built-in Windows voice. Everything runs on your PC — nothing is uploaded.
